

JDBC program to retrieve image from database

```
import java.sql.*;
import java.io.*;
public class FourthJDBC
{
    public static void main(String[] args)
    {
        try
        {
            Class.forName("com.mysql.jdbc.Driver");
            Connection con=DriverManager.getConnection("jdbc:mysql://localhost:3306/sis","root","12345678");

            PreparedStatement ps=con.prepareStatement("select * from TeamImage");
            ResultSet rs=ps.executeQuery();
            if(rs.next())
            {
                Blob b=rs.getBlob(2);
                byte barr[]=b.getBytes(1,(int)b.length());

                FileOutputStream fout=new FileOutputStream("Oracle.png");
                fout.write(barr);
                fout.open(barr);
                fout.close();
            }
            System.out.println("ok");
            con.close();
        }
        catch (Exception e)
        {
            e.printStackTrace();
        }
    }
}
```
